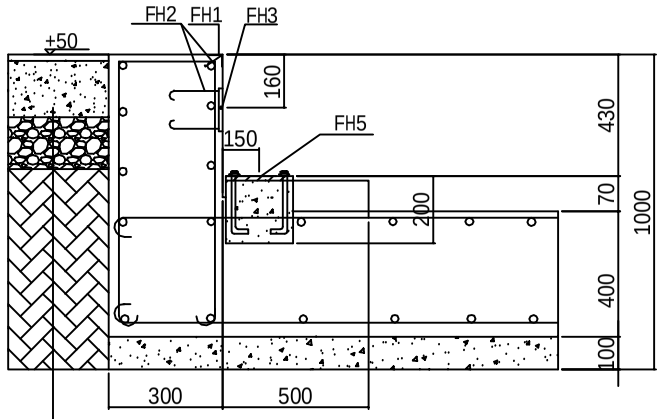
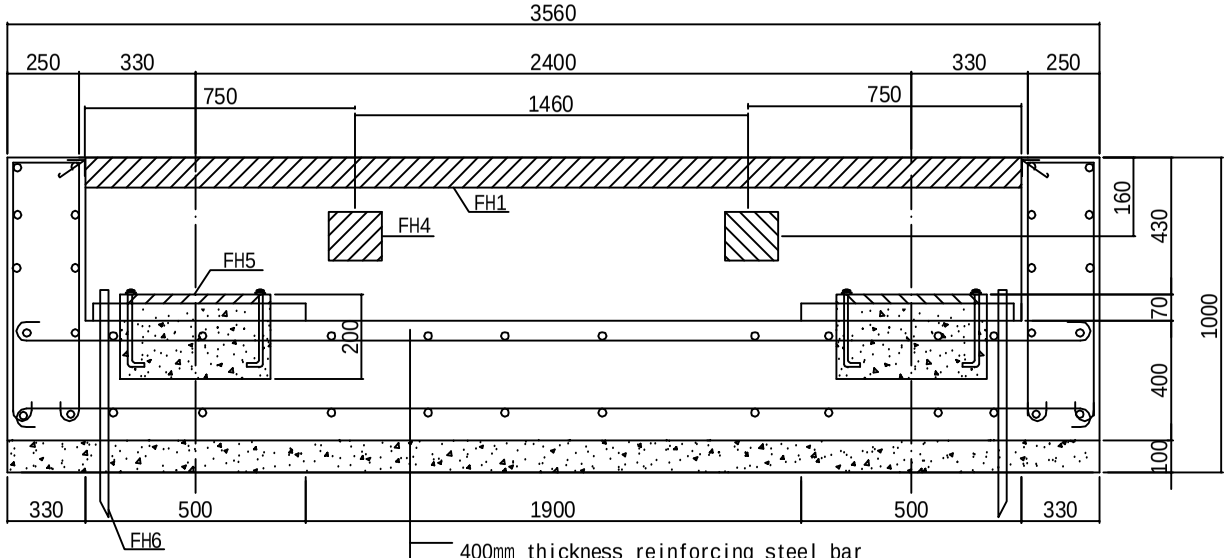
Draw		Auditted		SCS- 3 m x 7 m	Page 2
Correct		Date		Pit Foundation Draw	Page 1

M-M1 Cutaway Drawing



15mm thickness 1:2 cement-sand mortar hand <1:10 gradient
200mm thickness C20 concrete
tamping with 150mm thickness detritus
tamping with soil

M-M2 Cutaway Drawing



400mm thickness reinforcing steel bar
and concrete,double two way, Φ12@200
100mm thickness C10 plain concrete underlayed

Remark

	Symbol	Symbol	Explaination
		FH1	square steel (50 *50*5mm)
		FH2	100x⌀ 8 round steel bended to hooks
		FH3	Limit board (6*150*150mm) welding 4PCS FH2
		FH4	Specification of limit board same as FH3 embedding 4PCS
		FH5	16*300*300mm of load-bearing plate welding 4 PCS M4*150 bolt to fix
		FH6	Conductive pole,dimension ⩾⌀12, length⩾1250mm

1 All figures in the pictures are millimeter for the unit, height of natural floor ±0
2 Designed foundation bearing capacity ⩾**60kn/m^2**
3 Concrete±C20，"Hoop steel"of reinforcing steel bar should be round steel,others whorl steel, underlay C10 concrete 100mm thickness
* 4 Reinforce foundation according to carrying capacity of local soil and water level to avoid the foundation to go down,our pictures are just for your reference.
5 Relative error of centre of each bearing plate (front and back,left and right,diagonal) ⩽10mm
6 Surface of every bearing plate at the same level,error ⩽3mm,suggesting bearing plates irrigated twice to keep accurancy.
7 Embedding hollow plastic pipes at the same time with foundation construction.
8 The foundation place should be higher in the middle,lower at both sides to facilitate drainage (suggesting drainage holes use Φ150 pipes' single-hole or porous)
9 Conductive pole embedded next to foundation,and some buried near the pound house, indicator separately grounding (dimension of conductive pole ⩾Φ12,depth of embedding ⩾1200mm,outer from cement ground 50mm).
